"Survey Of Ethnobotany And Biocultural Heritage Of Wild Vegetables Used By Tribal Communities Of Dahanu Taluka, Maharashtra, India"

Sarika A. Kale¹, Dr. Ravikiran S. Pagare²

¹Department of Botany, School of Science, Sandip University, Trambak Road, Mahirwani, Nashik—422213, MH, India.

The tribal communities reside along the Western Coastal Region. The region of Dahanu Taluka of Palghar District, Maharashtra is known for the tribal communities viz. Warli, Dhodi, Dubla. These communities consume locally available wild vegetables by cooking them in their heritage way for their palatability and also to alleviate health problems. Wild vegetables are naturally grown plants generally found in forest. These plants grow naturally by seed germination. Therefore, these plants contain minerals, essential elements and highly useful biochemical. Wild vegetables also possess many medicinal properties and are eaten sparingly. Present study focused on the documentation and analysis for the nutritional value of 20 such wild vegetables through their traditional way of cooking. In present study, more than 170 tribals were interviewed to understand their folklore knowledge of these vegetables. The study also revealed that the knowledge is vanishing due to changing social values and non-participation of younger generation in collection and processing of such wild vegetables. The recorded biocultural heritage aims to explore the biodiversity and also to improve the wild vegetables status whose potential as a source of nutrition is undervalued.

Key Words: Ethnobotany, Wild vegetable, Nutritious value

Introduction

Ethnobotany, is a "science of people's interaction with plants" (Turner, 1995). Ethnobotany plays an essential role in the discovery of plant sources and bioactive molecules (Bhattarai and Karki, 2004). It helps to record relationship between native communities and native plants. The use of natural products with healing properties is as old as human civilization (Arekar, 2019). Biocultural heritage recognizes the inextricable links between biodiversity and people, and the critical role of Indigenous people in conserving nature. In contrast to Western conservation approaches that often assume that people have to be separated from nature in order to protect it, biocultural heritage puts people at the center of conservation. The term "heritage" reflects the ancestral rights of Indigenous people over the biodiversity they have conserved for generations, and the responsibility to continue to conserve biodiversity for future generations. It fosters strong community ownership, a bottom-up approach to conservation, that reflects the Indigenous peoples' own holistic worldviews.

Wild vegetables are naturally grown plants generally found in forest. These plants grow naturally by seed germination. Therefore, these plants contain minerals, essential elements and highly useful biochemical. Wild vegetables also possess many medicinal properties and are eatensparingly. These wild vegetables are utilized mostly by the tribal communities of our study area- Dahanu Taluka. Main tribal communities present in this area are Warli, Dhodi and Dubala. They utilize all the natural resources for their daily life purposes. Due to the development of modern agriculture, urbanization and globalization, the populations are becoming more and more distant from their environment (Turner and Turner, 2008) and the transmission of knowledge between older and younger not always assured (Agea et al, 2011) (Hopkins et al, 2015). So, current research was done to explore the biodiversity and also to improve the wild vegetables status whose potential as a source of nutrition is undervalued.

²Department of Botany, School of Science, Sandip University, Trambak road, Mahirwani,MH, India.

Material and Method

Current research was carried out in Dahanu taluka, dist. Palghar of Maharashtra, India.On 1 August 2014, the talukas of Mokhada, Jawahar, Talasari, Vikramgadh, Wada, Dahanu, Palghar and Vasai were separated from the erstwhile Thane district to form a new district Palghar. Total number of villages in this Taluka are 171. Dahanu is located at 19.97°N 72.73°E. It has an average elevation of 9.89 MSL. To the west of the town is the coast of the Arabian sea while the east is lined with the Sahyadri ranges. It is a coastal town and a municipal council in Palghar district of Maharashtra state in Konkan division. It is located 110 km from Mumbai city. Dahanu is located 65 km north of Virar on the Western Railway lineof Mumbai Suburban Railway. It can be reached from National Highway NH-8, 24 km off from Charoti Naka. It is 22 km North of Boisar on the Western Railway line.. There are mostly Warli, Dhodi, Dubala tribes in Dahanu. The people in Dahanu taluka are mostly tribals, mostly inhabiting rural areas and having daily commute to urban areas for work. Tribal culture isdominant in the talk and customs. The tribal art most predominantly shows village life and the day-to-day functions. The original people of this land are tribals. World-famous tribal art "Warli art" originated here from Warli tribe Dahanu's landscape includes a pristine coastline, meandering estuaries and large areas under agriculture and horticulture. Famous for its chiku fruit, Dahanu's horticultural economy also includes coconuts and mangoes to the surrounding areas. Besides the forest-dependent tribals, it is also home to a large fishing community living along its 35-kilometre-long coastline. In the current study, survey was done to know about native wild vegetables from March-2019- December 2019. Data was collected using preparation of questionnaire in local language. Around 170 tribals were interviewed to understand their folklore knowledge of these vegetables. The part of the vegetables which they utilize to make traditional recipes by which they cook was noted. Total 20 wild vegetables data were gathered in this research.

Result and Discussion

The data collected through interview was enumerated in form of- Scientific name, Local name, Family, recipe and its medicinal uses. Total 20 wild vegetables data was gathered and studied to understand the biocultural heritage. Table 1 depicts the data and figure 1,2,3 shows the images of selected wild vegetables.

Table no. 1- List of wild vegetables

Plant name	Local	Family	Recipe	Ethnomedicinal use
	Name			
Amorphophallus commutatusL.	Shevale, Mogari kanda	Araceae	Ingredients:Shevl a 1 bunch, Kakde8 -10, Onion 4, Garlic 7-8, Chilli powder-1 tsp, Salt to taste, Oil-2 tsp, Mustard Seeds 1 tsp, Asefotida ½ tsp, Garam Masala 1tsp, Turmeric Powder 1 tsp, Grated coconut-2 tbsp. Method:Discard the lower part ofthe veg and takeonly the upper portion.	It helps in restoring the gut bacteria and is alsohelpful in boostingimmunity and micronutrient (B12, D) assimilation. Rich in fibre content, this seasonal vegetable is also effective in weight loss.

Bambusa vulgaris L.	Bamboo	Poaceae	Ingredients:2 cups Bamboo shoots, julienned, 4 Spring Onion (Bulb & Greens),finely chopped, 1 tablespoon Oil, 1- 1/2 teaspoon Red Chilli powder, Salt, to taste To start making Bamboo Shoot Fry, Heat up a castiron skillet on medium heat. Add oil when it's hot, add chopped spring onions and saute for 2 minutes.Add bamboo shoots and cook for 2 minutes. Add salt, cook until all the vegetables are cooked but crispy. Sprinkle chilli powder and stir fora minute.	It helps in improving appetite and digestion, weight loss, and curing cardiovascular diseases and cancer. The shoots are reported to have anticancer, antibacterial, and antiviral activity.
Cassia tora L.	Takla	Fabaceae	All parts of takla can be eaten; tender leaves are stir fried with onion, garlic and red chillies, while the flowers are fried and eaten as amedicine for asthma. The tender beans and soft seeds of the bhaji are cooked in stir- fried preparations; mature seeds are ground and made into vadas or	The leaves and seedsare acrid, laxative, antiperiodic, anthelmintic, ophthalmic, liver tonic, cardiotonic and expectorant. The leaves andseeds are useful in leprosy, ringworm, flatulence, colic,dyspepsia, constipation, cough, bronchitis, cardiac disorders

			ground with wheator sorghum (jowar) for makingchapattis. The tribal people warn that since tarota bhaji is warm, it should be consumed in small quantities at a time—too much inone go could cause diarrhoea.	
Celocia aregentea L.	Kurdu	Amaranthaceae	oil 2-3 tbsp asafetida a pinch cumin seed 1 tsp mustard seed 1 tsp red chilli dry 2 nos ginger chopped 1 ½ tbsp garlic chopped 1½ tbsp green chilli chopped 4-5 nos onion chopped 2nos kurdu leaves 4 bunch yellow moong dal soaked 1 cup salt to taste turmeric powder 1 ½ tsp red chilli powder 2tsp dry mango powder 1½ tsp, fresh coconut grated(optional) ¼ cup + for garnish	It is used in the treatment of blood-shot eyes, blurring of vision, cataracts and hypertension but should notbe used by people with glaucoma because it dilates the pupils. The leaves are used in the treatment of infected sores, wounds and skin eruptions. The whole plant is used as an antidote for snakebites.

roasted peanut 2 tbsp Method: Wash and rinse the kuradu bunch, keep it aside. Fetchout the leaves from the stem and keep it apart. Heat a kadhai, add oil, asafetida, cumin seed, mustard seed, dry red chilli , allow it to splutter. Now add ginger, garlic and sauté it nicely on low flame for 30 seconds. Now addergen chilli, onions sauté it for 3-4 mins until its translucent. Now add kuradu leaves, compress and mix it well slowly. Now add moong dal, salt, turmericpowder, red chilli powder, dry mango powder andmix it well for 30 seconds. Close with the lid and cook it for 15-20 mins on low flame, stir occasionally. Now add grated coconut, roasted peanuts and mix it well Transfer it to serving bowl, garnish with grated coconut.

Clerodendrum serratum L.	Bharanga	Verbenaceae.	Ingredients – Bharanga leaves, onion, garlic, dry red chillies, lemon (optional). Preparation – Boil leaves, drain. Heatoil in a pan, add onion, garlic and pieces of dry red chili. Stir fry until lightly browned. Add Bharangi leaves and cook for 5 minutes. Addsalt to taste, Serve with a dash of lemon.	The leaves are used as a vegetable. The root of thisplant is used for treating respiratory disorders.
Chlorophytum borivilanum Sant. F	mulshi	Liliaceae	It can be cooked similar to Bharangi. Coarsely, groundraw soaked chanadal can be added;onions are optional.	It is used as curative of Natal and Post Natal Problems and a cure for Diabetes and Arthritis. Its root powder is fried in the ghee and chewed in case of apthae of mouth and throat. It is effective in curing rheumatism and joint pains.
Basella alba L.	Mayalu, Malabar spinach	Basellaceae	Vali ambat / Malabar spinach curry Ingredients: Malabar Spinach –a bunch, Toor Dal – 1/4 cup, Onion –1 medium sliced (2 tablespoon finally chopped for seasoning) Grated coconut – 1 cup Dry red chilly – 5-	Decoction of the leaves is recommended as a safe laxative in pregnant womenand children. Externally, the mucilaginous leaf is crushed and applied in urticaria, burns and scalds.

			7 Tamarind – 1/2 tsp Salt Oil Method-Wash and roughly chop the spinach leaves. Wash toor dal and pressure cook it. Mash it and keep it aside. Now for masala, grind together coconut, red chilly tamarindwith enough water into a smooth paste. Take a pressure cooker and cook chopped leaves with onions. When the leaves cooked enough, add the ground masala, toor dal, and salt and mix well, and cook for few more minutes. Then switch off the flame. Now take a small pan and heat oil. On low flame, fry finally chopped onions till it turns brown. Add this seasoning to thecooked curry.	
Tamilnadia ugliginosa (Retz.) Tirveng. & Sastre	Pendhra	Rubiaceae	Pickle- Collect thefresh fruits from the Pendhra plants. Wash it and dry the fruits. Cut it in to 4 halves longitudinally and remove the seeds. These halves boiled in water. Procedure Dried mango pieces boiled in small quantity and prepare paste fromit. Boiled the oil very well Take large vessel add pendhra fruits and all above ingredients and half quantity of boiled oil (add after cooling 500gm) and mixedwell with spoon. After cooling filledit in clean, aseptic glass jar, add remaining oil and try to cover the entire surface with oil, to avoid the contamination of fungus and moulds. Cover with clean and tiedlid. Placed in cool place. Avoid direct sun light.	Roots - Diarrhoea, Aphrodisiac diuretic, biliousness Fruits : Astringent, used as vegetable also. The raw fruit extract is used againstdiarrhoea and dysentery. Fruit pulp is applied for curing boils. The fruits are rich source of carbohydrate and posses insecticidal properties. It cures abscess,ulcer, inflammation, wounds, tumour and skin.

Conclusion

The study helped in understanding tribal folklore knowledge about these 20 wild vegetables and their biocultural heritage recipes which are simple yet nutritious. The study alsorevealed that the knowledge is vanishing due to changing social values and non-participation of younger generation in collection and processing of such wild vegetables. The recorded biocultural heritage aims to explore the biodiversity and also to improve the wild vegetables status whose potential as a source of nutrition is undervalued.
